

Week 1

Product backlog:

- Create GIT repo
- Describe target audience
- Create site map
- Create wireframe
- Create website
 - Create basic structure
 - Body
 - Header
 - Main
 - Footer
 - Navigation
 - Svg logo
 - Image
 - Iframe
 - Article
 - Form
 - Contact information
 - Write comments
- Validate our code
- Write group report week 1
- Write group report week 2
- Write group report week 3

Date of the meeting/seminar: 02/09/2022

Scrum master: Modestas

Students present: Kevin, Modestas, Vithujan, Kavishnayan

Sprint backlog:

- Describe the target audience
- Create the site map
- Create the wireframe
- Create the website itself
- Create basic structure for the website
- Write the group report for week 1

Retrospective/Reviewing

Challenges List with challenges:

- Choosing the topic for the project

Seeing as the HTML code we were to implement this week was relatively straight-forward the only challenge we faced was finding the purpose our website is supposed to serve. After some discussion we came to an agreement that a page for a train traveling company made most sense, a decision based on the project requirements we had. Traveling companies often require forms that the user must fill in, articles containing news and information about possible disruptions and google maps providing help with navigation when choosing a route. These things led us to believe that designing this type of website would best fit our project needs.

What went well / not that well (both with the assignment and collaboration?)

The group members got along really well from the get-go, something that contributed to the overall good mood in the group and led to increased willingness to work together to create a good product. The goals we had set for ourselves for week one were accomplished with relative ease and no problems that we struggled to solve arose.

Restructuring and re/planning of the tasks for the next sprint:

The only change we would like to make for next week is to try and have an in-person meet up on campus to continue working on our project instead of doing it digitally on Discord, like we did this week. We believe that all group members being present physically will lead to even better productivity and help us solve any problems that might arise more easily.

Week 2

Product backlog:

- Create GIT repo
- Create website
 - Create basic structure
 - Body
 - Header
 - Main
 - Footer
 - Navigation
 - Svg logo
 - Image
 - Iframe
 - Article
 - Form
 - Contact information'
 - Write comments
- Validate our code
- Write group report week 2
- Write group report week 3

Date of the meeting/seminar: 09/09/2022

Scrum master: Modestas

Students present: Kevin, Modestas, Vithujan, Kavishnayan

Sprint backlog:

- Create git repo
- Add navigation for the website
- Add an image to the website
- Add an SVG logo to the website
- Add a form to the website
- Add a figure with its corresponding figcaption to the website
- Add a google map embedded in an iframe to the website
- Add an article to the website
- Add contact information to the website
- Work on the formatting of the website
- Write the group report for week 2

Retrospective/Reviewing

Challenges List with challenges:

- Not being able to style the contents of our website to match the wireframe
- Sharing code and keeping track of changes to the code

When it came to the styling our website's contents to match the wireframe, we decided to just not use CSS, as the assignment was only focused on the HTML part. This was a decision made by all project members.

When it came to sharing code, we solved it by using GitLab. GitLab gave us a platform to share our work and give access to only authorized members. Further, GitLab offered version control, which solved the problem of keeping track of changes to the code. All members contributed with suggesting ideas on how to solve this issue.

What went well / not that well (both with the assignment and collaboration?)

The collaboration went really well, all members contributed with ideas and with work related to the goals we set for week 2.

Restructuring and re/planning of the tasks for the next sprint:

We don't believe that any restructuring or replanning is needed for next week. We believe we have a good idea of what parts of the project we need to keep working on and what needs to be improved.

Week 3

Product backlog:

- Create website
 - Write comments
- Validate our code
- Write group report week 3

Date of the meeting/seminar: 16/09/2022

Scrum master: Modestas

Students present: Kevin, Modestas, Vithujan, Kavishnayan

Sprint backlog:

- Continue working on the documentation
- Add detailed comments to the HTML code
- Write the group report for week 3

Retrospective/Reviewing

Challenges List with challenges:

- Not everyone being able to meet up physically

When it came to meeting up physically, there was one member that could not meet up physically due to a fractured ankle. To solve this, all members who could meet up physically met up in person, and those who couldn't would participate online by using Discord.

What went well / not that well (both with the assignment and collaboration?)

The collaboration went well, even though not everyone were able to meet physically. Everyone contributed and actively participated in the group work, and we completed the assignment Oblig 1 with a lot of time to spare.

Restructuring and re/planning of the tasks for the next sprint:

Again, we don't believe that any restructuring or replanning is needed for next week. We believe we have a good idea of what parts of the project we need to keep working on and what needs to be improved.
